First Customer Live in Orange County

Last week, Open Broadband turned up its first tower and installed its first customer in Orange County! This is an exciting milestone, but we still have lots of work to do. For the rest of the month we'll be testing the tower, making needed adjustments and adding a limited number of additional customers. After the controlled introduction period, we will begin scheduling and installing customers around this first tower.

The order in which you joined the waitlist does not determine the order in which you will receive service. Instead, we will be installing customers closest to towers first and working outwards to maximize installation efficiency.

Tower By Tower

Not all of the towers will be activated at the same time. The first tower, located at 510 Meadowlands Dr (next to the Sportsplex) is currently live and the second tower, located at the Cedar Grove Fire Department (720 Hawkins Rd), will be live this month. It will take several towers to cover the entirety of the Phase 1 area, which will be activated one by one over the coming months. We will share a more detailed map and schedule as it becomes solidified.

Many of you have expressed interest in having a tower on your property if need be. We have your information and will be in touch with you if we determine your location might be a good fit. However, we are prioritizing using existing vertical assets like grain silos, ham radio towers, etc, first. If you have an existing vertical asset, email emily@openbb.net to learn more.

Interested in working with us?

We've begun interviewing local installers and are looking to hire entry-level installation technicians (see [job description](#)). Interested applicants should email a resume to info@openbb.net for consideration.
